

I CLAIM:

1. A fuse securing assembly comprising:

a base,

two conductor blades secured to said base and
extended outward of said base, said conductor blades

05 each including a groove formed therein, and

a fuse member including two ends engaged into said
grooves of said conductor blades for securing to said
conductor blades.

2. The fuse securing assembly according to claim
1, wherein said conductor blades each includes an
opening formed therein and communicating with said
grooves thereof respectively for receiving said ends of

05 said fuse member.

3. The fuse securing assembly according to claim
1, wherein said conductor blades each includes a

03 conductor extension extended outward of said base.

4. The fuse securing assembly according to claim
3, wherein said base includes an upper portion and a
bottom portion, said conductor blades are extended
outward from said upper portion of said base, and said

05 conductor extensions are extended outward from said
bottom portion of said base.

5. The fuse securing assembly according to claim 1
further comprising a cover secured to said base for

03 shielding said fuse member and said conductor blades.
